LAKE BLUFF, Ill., Oct. 24, 2017 /PRNewswire/ -- Buehler, a global industrial manufacturer of value added consumables and testing equipment, is introducing the [EcoMet 30 Semi-Automatic and Manual Grinder and Polisher](#) for use in heat treat, automotive, aerospace, and electronic laboratory environments where fast reliable results are required in production environments. The EcoMet 30 will be officially unveiled at the 29<sup>th</sup> Heat Treating Society Conference and Expo in Columbus, Ohio at Buehler's booth #2002. Quality control and lab technicians now have a choice of more robust semi-automatic or manual grinder polisher with the power to perform in high sample, high use environments.

The EcoMet 30 Semi-Automatic provides simple operation for grinding and polishing with an ergonomic base that is easy to clean. Constructed from solid cast aluminum, the EcoMet 30 range is designed for maximum robustness and reliability in the most challenging of environments. The EcoMet 30 Manual provides simple operation and includes a splash guard, ergonomic design and low bowl height for better control and comfort. The straight drain, removable bowl liner and quick remove platen make daily maintenance a breeze.

The EcoMet 30 semi-automatic version includes a user-friendly touchscreen interface, with all functions on the front screen without complicated menus. The pneumatic polishing head also has an easy load specimen holder and swing-out head to maximize efficiencies of use.

Product Manager, Jill Dreschler comments: "The robust cast aluminum platform used for both the Semi-Automatic and Manual models greatly enhances performance and durability. The careful design of ergonomics will speed and simplify sample preparation, key to efficiency in

[KEMET Corporation \(NYSE: KEM\): A Leading Global Supplier of Passive Electronic Components, Interview with Per Loof, CEO by Dr. Allen Alper, PhD Economic Geology and Petrology, Columbia University, NYC, USA](#)

KEMET Corporation (NYSE:KEM), a leading global supplier of passive electronic components, offers the broadest selection of capacitor technologies in the industry, along with an expanding range of electromechanical devices, electromagnetic compatibility solutions and supercapacitors. KEMET's vision is to be the preferred supplier of electronic component solutions for customers demanding the highest standards of quality, delivery and service. We learned from Per Loof, CEO of KEMET, that they do many of their manufacturing activities in places like China, Vietnam, Thailand, Indonesia, Japan, Macedonia, Bulgaria, Italy, Portugal, Sweden, Finland, Mexico, and in the U.S. KEMET's major component is capacitors but they also make inductors, filters, suppressors and sensors of various types. According to Mr. Loof, they supply about 95% of all dielectrics. We learned from Mr. Loof that KEMET is known for its innovations and needs to stay in the forefront of technology. They are the market leader in conflict-free tantalum and, in particular, the newer organic polymer capacitor field. Mr. Loof is especially proud to be

**White Rock Minerals (ASX: WRM): In possession of a globally significant zinc and silver VMS Project in Alaska, and a Gold-Silver Project in Northern NSW Australia, Interview with Matthew Gill, Managing Director and CEO by Dr. Allen Alper, PhD Economic Geology and Petrology, Columbia University, NYC, USA**

White Rock Minerals (ASX: WRM) is an Australian minerals exploration and development company with projects located in northern NSW and central Alaska. White Rock's cornerstone asset is the Mt Carrington epithermal gold-silver project in northern NSW. Their other asset is the advanced VMS Red Mountain project in Alaska with high grade zinc and silver in two deposits. We learned from Matthew Gill, who is Managing Director and CEO of White Rock Minerals that Mt Carrington is an advanced stage project with about 50% gold 50% silver, with a definitive feasibility study, currently in progress and an approved mining lease. According to Mr. Gill, the project already has a finance proposal from a private equity group in New York called Cartesian, one of White Rock's largest shareholders, who would like to fund the construction of the mine. As far as the Red Mountain project, it is a globally significant zinc and silver project, recently acquired by White Rock that is already able to stand shoulder-to-shoulder with other ASX-listed peers in the zinc space.

Serengeti Announces Drill Mobilization to UDS Property & Start of Drilling at Milligan West Project **VANCOUVER, BRITISH COLUMBIA--(Marketwired - Sept. 19, 2017) - Serengeti Resources Inc. (TSX VENTURE:SIR)(FRANKFURT:34S)** announces that a drill has been mobilized for the Company's maiden exploration drilling on the UDS property. Drilling will include testing a very strong induced polarization (IP) geophysical anomaly associated with a strong copper-zinc-gold soil geochemical response and favourable altered

the Company's wholly-owned Liberty project, a molybdenum and copper property also located in central Nevada, General Moly's goal is to become the largest pure-play primary molybdenum producer in the world. We learned from Bruce Hansen, who is CEO and also CFO of General Moly, that the Mt. Hope project is on the lower end of the primary producer cost curve and has already attracted large strategic players in the steel industry. The Liberty project is an excellent follow-on asset that will produce about half the amount of moly as compared to the Mt. Hope project and will also produce by-product copper. Plans for 2018 include finalizing all required permits for the Mt. Hope project. According to Mr. Hansen, the moly market is improving over the long term and General Moly is the go-to story in the moly space.
