Buehler Marks 100 Year Anniversary of Wilson Hardness Brand

FEBRUARY 26, 2020

MANUFACTURING HEAT TREAT NEWS

ITW Company Buehler recently celebrated the 100-year anniversary of its Wilson® hardness brand, which was originally known as the Wilson Mechanical Instrument Company. Stanley Rockwell and founder Charles H. Wilson introduced the Rockwell hardness tester. Later, Wilson became the home of the Tukon line of micro-indentation testers, known for Knoop and Vickers testing. These early inventions paved the way for Wilson today.

Buehler is proud to commemorate and celebrate the legacy of the Wilson name. Buehler's affiliation with Wilson began in 2012 when the Wilson® brand of hardness testers encompassing Reichert, Wilson, and Wolpert products became part of Buehler's offering.

*Julien Noel,
General Manager,
Buehler*

According to Buehler General Manager, Julien Noel, "We are proud to continue the 100-year legacy of innovation and excellence in Wilson Hardness. By having our engineering, manufacturing, and service in-house, Buehler's Wilson products have become the preferred choice for

demanding labs that need to consistently meet quality standards. In the coming year, Buehler will continue to focus on exceeding customer expectations with a new

and improved Rockwell tester, and an extended range of hardness reference blocks according to ISO, ASTM and JIS standards.”
