FAQS

What is included in the Preventative Maintenance Kit?
Each Preventative Maintenance Kit is different for each piece of equipment. For a detailed list of parts, ask your Service Technician or Sales Engineer. Any part that is not included in the wear kit may be purchased at a discounted rate (10% discount).

When is the best time to start a preventative maintenance program?
While a preventative maintenance program can start at any time, the most benefit will be gained by starting as soon as possible—even while the machine is still under warranty. Consistently maintaining your machine throughout its entire lifespan will maximize performance and protects your machine from damage that can occur if wear parts are not properly maintained.
